Ms. Debbie Sidell
Vice President
Humane Manufacturing
1350 Venture Drive
Janesville, WI 53548

Dear Ms. Sidell:

This interim report is to inform you of the findings of my consultation with Humane Manufacturing in Janesville Wisconsin, on June 8, 2007. When referring to this letter, please reference the Visit Number 504218868 or Study Number 9109-0.

At the request of the Janesville facility I conducted a limited scope health consultation to assist them in assessing employee exposure to chemicals.

Air monitoring results on the day of the study indicated exposure levels well below the OSHA permissible exposure levels. Please see the enclosed tables for personal air monitoring results. An area sample was also taken using a mini can, to assess exposure to volatile organic exposures (VOC's). The results of this sampling also indicated levels of exposures well below the OSHA permissible exposure limits. Please note the detection levels were in parts per billion (ppb). Please share these results with your employees.

Thank you for your assistance. We were pleased to work with you and commend you for your efforts in providing a healthful work place for your employees.

Sincerely,

Eric D. Hands
Industrial Hygiene Consultant
